ABAP Cloud Landing Page

ABAP Cloud is the ABAP development model used to build cloud-ready business apps, services, and extensions.

ABAP was originally designed for developing enterprise business applications. Over time, new concepts, technologies, and statements have been added, but not all are built for cloud technology. Therefore, ABAP needed to clearly define which technologies and languages can support all necessary cloud features. ABAP Cloud helps streamline this process by providing a stable ecosystem for developing complex enterprise apps involving multiple parties and various layers of extensions.

What is the Landing Page all about?

ABAP Cloud is a development model that can be applied in public cloud and on-premise environments. The technologies, tools, and concepts behind ABAP Cloud are almost all applicable for all deployment options, which significantly decreases the learning investment needed to develop in the different ABAP environments. Once you know how to develop with ABAP Cloud, you can apply that knowledge for public cloud as well as on-premise development projects. ABAP Cloud consists of many different technologies, concepts, and tools. This is where the ABAP Cloud landing page comes into play.

To put it simply, the goal is to help developers get the most out of ABAP Cloud. You can watch the replay of the [Hello, ABAP Cloud!](#) 🎤 DEVtober session to get the broader picture.

The ABAP Cloud landing page groups the most important topics, resources, and sources of further information to make them easily accessible for you.

It focuses on the following personas:

- **Beginners:** For beginners, we assume that you're new to ABAP and ABAP Cloud. We recommended starting with the [Get Started](#) to get an overview of recommended readings and resources to get you onboarded quickly.
- **Experts:** For experts, we assume that you're already experienced in ABAP Cloud development and look for the latest developments. We recommend starting with [News](#) to get an overview of the latest features.
- **Classic ABAP Developers:** For classic ABAP developers, we assume that you're familiar with the classic development model. To get an overview of ABAP Cloud, we recommend starting with [Get Started](#).

[Get Started](#)

[Transactional Apps](#)

With the ABAP RESTful application programming model (RAP), you can develop and extend transactional SAP Fiori apps.

[Analytical Apps](#)

With the ABAP Core Data Services (CDS), you can develop and extend analytical, lifecycle-stable and upgrade-safe apps and services.
