Documentation Overview

Get an overview of the available documentation for ABAP Cloud.

Content Overview

ABAP Cloud covers a wide range of concepts, technologies, and frameworks that are required to build different types of apps and services. You can find the relevant documentation also on the [ABAP Cloud product page](#).

The ABAP Cloud documentation is structured as follows:

- **BIG PICTURE:** This overview allows you to put ABAP Cloud concepts and technologies into a wider context. It will help you understand high-level concepts and gain a bird's eye view.
- **DEVELOPMENT USE CASES:** These guides provide the basis for domain-specific implementation within the wider context of ABAP Cloud development scenarios. Whether your aim is to construct a SAP Fiori app for either analytical or transactional scenarios, or to implement an integration use case with a specific protocol or business events, you have guidelines available. This detailed documentation features all the necessary concepts and step-by-step instructions you require to carry out varying use cases from beginning to end..
- **DOMAIN-SPECIFIC IMPLEMENTATION:** These comprehensive guides provide the framework and syntax needed for implementing development use cases. They include the ABAP language documentation along with documentation for ABAP Core Data Services (CDS) and general ABAP concepts. This set of resources equips you with all you need to comprehensively understand and execute your development tasks.
- **DATA ACCESS:** Learn how to connect to the data required to build apps and services with ABAP Cloud. Data can be consumed either from a SAP HANA database or via business service consumption in a cross-system set-up. Depending on your use case, you can find the relevant information either in the SAP HANA documentation or in the documentation of the integration development use case..

All layers are accompanied by documentation for **Tools**, **Built-In Qualities**, and **Reuse Services and Libraries** that are relevant on all levels.
